Introduction

Tobacco use is the single most preventable cause of death in the world today, and is estimated to kill more than five million people every year – more than tuberculosis, HIV/AIDS and malaria combined. By 2030, the death toll will exceed eight million a year, unless urgent action is taken. Implementation of the World Health Organization Framework Convention on Tobacco Control (WHO FCTC) can reverse this devastating epidemic if it becomes a top public health priority especially for countries’ political leaders.

The Zambia Report Card on the WHO FCTC provides descriptive analysis of country-level data that reflect the status and progress on some key articles of the WHO FCTC. This is one of a series of Report Cards for countries in the WHO African Region.
Background

1. WHO Framework Convention on Tobacco Control (WHO FCTC)

   The WHO FCTC is an evidence-based treaty that was developed in response to the globalization of the tobacco epidemic. It was adopted by the World Health Assembly in 2003 and became international law on 27 February 2005. The treaty contains articles aimed at both reducing the supply of and demand for tobacco. This Report describes country progress on the following key WHO FCTC Articles and relevant Guidelines:

   - Article 5.3: Protect public health policies from tobacco industry interference;
   - Article 6: Price and tax measures to reduce the demand for tobacco;
   - Article 8 provisions and Guidelines: Protection from exposure to tobacco smoke;
   - Article 11 and Guidelines: Packaging and labelling of tobacco products;
   - Article 13 and Guidelines: Tobacco advertising, promotion and sponsorship;
   - Article 20: Research, surveillance and exchange of information.

2. Reporting Instrument of the WHO FCTC

   The WHO FCTC requires countries that are Parties to the Convention (Parties) to submit periodic reports to the Conference of the Parties (COP). The objective of these reports is to “enable Parties to understand and learn from one another’s experiences in implementing the WHO FCTC.”

   In accordance with WHO FCTC Article 21, Parties report initially 2 years after entry into force of the WHO FCTC for that Party, and then every 3 years, i.e.:

   - Phase 1 (Group 1 questions): within 2 years of entry into force;
   - Phase 2 (Group 2 questions): within 5 years of entry into force;
   - Phase 3 (Group 3 questions): within 8 years of entry into force.

   Reporting tools are provided at the WHO FCTC COP website:
   www.who.int/fctc/reporting/reporting_instrument/en/index.html

3. Global Tobacco Surveillance System (GTSS)

   WHO, the US Centers for Disease Control and Prevention (CDC), and others began development of the GTSS in 1999 with the purpose of enhancing the capacity of countries to design, implement, and evaluate their national comprehensive tobacco control action plan and to monitor some key articles of the WHO FCTC. The GTSS includes four surveys:

   - Global Youth Tobacco Survey (GYTS): school-based survey of students aged 13–15 years that provides information on demographics, tobacco use prevalence, and knowledge and attitudes.
   - Global School Personnel Survey (GSPS): provides demographics, tobacco use prevalence, knowledge and attitudes information, as well as information on school policy and curriculum.
   - Global Health Professional Students Survey (GHPS): school-based survey of 3rd-year students pursuing advanced degrees in dentistry, medicine, nursing, or pharmacy.
   - Global Adult Tobacco Survey (GATS): household survey that tracks tobacco use prevalence, exposure to risk, second-hand smoke, cessation, risk perceptions, knowledge and attitudes, exposure to media and price as well as taxation issues.

   These WHO reports detail information on internationally comparable prevalence estimates and data that allows assessment of country compliance with policies on smoke-free environments, treatment of tobacco dependence, health warnings and packaging, advertising, promotion and sponsorship bans, price and taxation levels, and key national capacity indices.
## Status of WHO FCTC in Zambia

<table>
<thead>
<tr>
<th>Article</th>
<th>Requirement</th>
<th>Zambia status</th>
</tr>
</thead>
</table>
| **Article 5.1**  
National strategies, plans, programmes and coordinating mechanism | Each Party shall develop, implement, periodically update and review comprehensive multisectoral national tobacco control strategies, plans and programmes, establish or reinforce and finance a national coordinating mechanism or focal points for tobacco control. | National agency with staff. |
| **Article 6**  
Price and tax measures to reduce demand for tobacco products | Take account of national health objectives concerning tobacco control and adopt or maintain measures which may include implementing tax and price policies on tobacco products so as to contribute to the health objectives aimed at reducing tobacco consumption; and prohibiting or restricting tax- and duty-free tobacco products. | Total tax on the most sold brand is 44%. |
| **Article 8**  
Protection from exposure to tobacco smoke | Adopt and implement measures, providing for protection from exposure to tobacco smoke in indoor workplaces, public transport, indoor public places and, as appropriate, other public places. | Complies with Article 8 requirements. |
| **Article 11**  
Packaging and labelling of tobacco products | Adopt measures within 3 years of entry into force that require display of rotated series of health warnings and other messages on tobacco product packaging that cover at least 30% of the principle display areas--ideally 50% or more, and include pictures or pictograms---and that prevent false, misleading or deceptive packaging and labelling. | Regulations mandate that health warning bans deceitful terms. |
| **Article 13**  
Tobacco advertising, promotion and sponsorship | Undertake a comprehensive ban of all tobacco advertising, promotion and sponsorship within 5 years of entry into force. | Does not comply with Article 13 requirements. |
Zambia

National action is critical in order to achieve the vision embodied in the WHO FCTC.

<table>

</thead>
<tbody>
<tr>
<td>Zambia does not have national strategies, plans and programmes on tobacco control.</td>
<td>Zambia has a national agency on tobacco control with five full-time equivalent employees.</td>
<td>Overall national budget for tobacco control activities was US $37 257 in 2009 (official exchange rate).</td>
</tr>
</tbody>
</table>

Zambia has a national tobacco control agency and should develop comprehensive multisectoral national action plan on tobacco control.

National action

Building national capacity to carry out effective and sustainable national tobacco control programmes is one of the most significant measures required to combat the tobacco epidemic. Successful implementation of the WHO FCTC requires establishing a national coordinating mechanism with an official government mandate for developing and coordinating a plan of action as well as building a national infrastructure to implement and evaluate the plan. AFRO recommends that Zambia develop a comprehensive national action plan.

Cessation

The population in Zambia does not have access to a toll-free quitline. Nicotine replacement therapy and bupropion are available in pharmacies with a prescription. Smoking cessation support is available from some health professionals and community centres, but not in hospitals or primary care facilities.

In Lusaka in 2007, 71.8% of the currently smoking students expressed a desire to stop and 84.3% currently smoking students reported ever receiving help to stop smoking.

In Chongwe/Luangwa, between 2002 and 2007, the proportion of currently smoking students who wanted to stop smoking increased. In 2002, 68.9% of the currently smoking students expressed a desire to stop. In 2007, 83.7% of the currently smoking students expressed a desire to stop.

In Kafue in 2007, 71.8% of the currently smoking students expressed a desire to quit.

There is therefore a clear need for cessation services in Zambia.
Tobacco use prevalence

Article 20 WHO FCTC on research, surveillance and exchange of information requires Parties to establish, as appropriate, programmes for national, regional and global surveillance of the magnitude, patterns, determinants and consequences of tobacco consumption and exposure to tobacco smoke.

AFRO recommends that countries obtain nationally representative and population-based periodic data on key indicators of tobacco use for youth and adults. AFRO also recommends that countries continue to successfully participate in the GYTS, expand participation in the GSPS, GHPS and GATS as well as other representative national surveys. Countries are also encouraged to report the findings widely and utilize them to inform tobacco control policy development, programme planning and evaluation.

Adult tobacco use

Among adults of 18 years and above, the prevalence of current tobacco smoking was 14% in 2003 with 22.7% males and 5.7% females.

Youth tobacco use

In Lusaka, between 2002 and 2007, 13-15 years old students reported a decrease in prevalence of current cigarette smoking but prevalence of current use of other tobacco products increased.

In 2002, 9.2% of students (boys=9.4%; girls=8.7%) currently smoked cigarettes and 17.7% (boys=17.1%; girls=17.3%) currently used other tobacco products. In 2007, 6.8% of students (boys=6.7%; girls=6.8%) currently smoked cigarettes and 22.8% (boys=22.8%; girls=22.8%) currently used other tobacco products.

In Chongwe/Luangwa, between 2002 and 2007, there was an increase in prevalence of current cigarette smoking and current use of other tobacco products among 13-15 year old students.

In 2002, 12.3% of students (boys=14.1%; girls=10.1%) currently smoked cigarettes and 19.8% (boys=17.8%; girls=22.2%) currently used other tobacco products. In 2007, 13.5% of students (boys=14.9%; girls=12.5%) currently smoked cigarettes and 25.7% (boys=26.7%; girls=24.8%) currently used other tobacco products.

In Luan/Kafue, in 2002, 8.6% of students (boys=10.6%; girls=5.9%) currently smoked cigarettes and 15% (boys=15.7%; girls=14.2%) currently used other tobacco products. In Kafue in 2007, 6.8% of students (boys=6.7%; girls=6.8%) currently smoked cigarettes and 22.8% (boys=22.8%; girls=22.8%) currently used other tobacco products.

Among youth in major Zambia cities, use of other tobacco products was higher than cigarette smoking.
Smoke-free policies

Countries should protect people from tobacco smoke.

Every person has a right to breathe air free of tobacco smoke.

In addition to protecting the health of non-smokers, smoke-free environments encourage smokers to quit.

Evidence from pioneering countries shows that smoke-free laws do not harm businesses and are popular with the public.

Permitting smoking in designated areas undermines the benefit of smoke-free environments.

Zambia law

Article 8 of the WHO FCTC mandates protection from exposure to tobacco smoke in indoor workplaces, public transport and indoor and other public places. Guidelines for this Article were unanimously adopted by the Conference of the Parties in July 2007.

AFRO recommends that countries enact and enforce completely smoke-free environments in all indoor public places including workplaces, restaurants and bars. AFRO further recommends that all countries should become compliant with the requirements of Article 8 guidelines, and that 100% smoke-free environments should become the norm in all societies.

Zambia has national bans on smoking indoors in educational and governmental facilities, health-care facilities, universities, indoor offices, other indoor workplaces, public transport, restaurants, pubs & bars. There are subnational jurisdictions with authority to adopt and implement laws that ban tobacco smoking in such places.

Youth exposure to second-hand smoke

In Lusaka, in 2002, nearly three in ten students (29.4%) were living in homes where others smoked in their presence and over four in ten (40.9%) were exposed to smoke in public places. In 2007, almost a quarter (23.1%) of the students lived in homes where others smoked in their presence and over four in ten students (45.5%) were exposed to smoke in public places.

In Chongwe/Luangwa, in 2002, three in ten students (31.3%) were living in homes where others smoked in their presence and over four in ten (43.8%) were exposed to smoke in public places. In 2007, three in ten (30%) students lived in homes where others smoked in their presence and over four in ten students (46.1%) were exposed to smoke in public places.

In Kafue, in 2002, almost one quarter of the students (23.7%) were living in homes where others smoked in their presence and over one third (34.1%) exposed to smoke in public places. In 2007, 23.1% students lived in homes where others smoked in their presence and over four in ten students (45.5%) were exposed to smoke in public places.

Therefore in general, youth exposure to second-hand smoke is significant and requires interventions.
Health warnings and education

Countries should warn about the dangers of tobacco use and exposure to tobacco smoke.

**Zambia warning**

- No mandated rotating, specific health warnings or large, clear text
- No mandated principal display surface
- No pictures or pictograms
- Ban on false, misleading or deceptive packaging and labelling

**Best practice warning**

- Rotating, specific warnings and large, clear text
- 65% of display surface
- Pictures or pictograms
- Ban false, misleading or deceptive packaging and labelling

**Zambia labelling**

There is a ban on use of deceitful terms, such as ‘low tar’, ‘light’ or ‘mild’ on tobacco product packaging in Zambia. The country does not mandate that a certain percentage of the principal display area on tobacco product packaging be covered by a health warning.

**Zambia education**

Education on tobacco-related issues in schools increased in major Zambia cities between 2002 and 2007. In Lusaka in 2002, 46.6% and 47.8% of students had been taught in school about dangers of smoking and effects of tobacco use, respectively. In 2007, 48.3% and 49.5% of students had been taught in school about dangers of smoking and effects of tobacco use, respectively.

In Chongwe/Luangwa in 2002, 48.3% and 51.6% of students had been taught in school about dangers of smoking and effects of tobacco use, respectively. In 2007, 55.1% of students had been taught in school about dangers of smoking and effects of tobacco use.

In Kafue in 2002, 39.1% and 42% of students had been taught in school about dangers of smoking and effects of tobacco use, respectively. In 2007, 48.3% and 49.5% of students had been taught in school about dangers of smoking and effects of tobacco use, respectively.
Advertising, promotion & sponsorship

Countries should enforce comprehensive bans on tobacco advertising, promotion and sponsorship.

- Widespread advertising falsely associates tobacco with desirable qualities.
- Studies have found that advertising bans can lower tobacco consumption.
- About half the children of the world live in countries that do not ban free distribution of tobacco products.

Bans in Zambia

Zambia does not have bans on direct tobacco advertising. Further, there is no ban on tobacco promotion or sponsorship.

Youth exposure

In Lusaka in 2002, 55.1% of students saw pro-cigarette advertising on billboards and 57.5% in newspapers and magazines. In 2007, 55.5% of students saw these advertising on billboards and 57.5% in newspapers and magazines. Proportion of students with an object with a cigarette brand logo was 17.9% in 2002 and 18.6% in 2007.

In Chongwe/Luangwa in 2002, 51.8% of students saw pro-cigarette advertising on billboards and 55.7% in newspapers and magazines. In 2007, 55.5% of students saw these advertising on billboards and 57.5% in newspapers and magazines. Proportion of students with an object with a cigarette brand logo was 22.7% in 2002 and 17.6% in 2007.

In Kafue in 2002, 50% of students saw pro-cigarette advertising on billboards and 55.9% in newspapers and magazines. In 2007, 55.5% of students saw these advertising on billboards and 57.5% in newspapers and magazines. Proportion of students with an object with a cigarette brand logo was 20.2% in 2002 and 18.6% in 2007.

In general therefore, the youth are still significantly exposed to advertising, promotion and sponsorship information from the tobacco industry.
Best practices

Tobacco taxes are the most effective way to reduce tobacco use, especially among young people and the poor.

Tobacco tax increases also increase government revenues. Only four countries, representing 2% of the world's population have tax rates greater than 75% of the retail price.

In countries with available information, tobacco tax revenues are more than 500 times higher than spending on tobacco control. In low- and middle-income countries, tobacco tax revenues are more than 9000 and 4000 times higher than spending on tobacco control, respectively.

Zambia taxes

In 2009 the price of the most sold brand of cigarettes was about US $1.14. The total taxes on most sold brand are 44%; total excise on most sold brand is 31%.

Increasing tobacco taxes by 10% generally decreases tobacco consumption by about 8% in low- and middle-income countries.

Zambia policy recommendations

National action

AFRO recommends that successful implementation of the WHO FCTC requires establishing a national coordinating mechanism with an official government mandate for developing and coordinating a plan of action as well as for building a national infrastructure to implement and evaluate the plan.

Zambia should establish national strategies, plans and programmes for tobacco control.

Smoke-free policies

AFRO recommends that countries become compliant with WHO FCTC Article 8 requirements and its guidelines and enact and enforce completely smoke-free environments in all indoor public places including workplaces, restaurants and bars.

Zambia should ensure effective enforcement of smoke-free policies.

Health warnings and education

AFRO recommends that countries fully comply with WHO FCTC Article 11 requirements and its guidelines and implement large, prominent, strong and effective graphic health warnings on packages, require effective package warning labels, implement counter-tobacco advertising, and obtain free media coverage of anti-tobacco activities.

Zambia should become fully compliant with WHO FCTC Article 11 requirements and its guidelines by 28 August 2011.

Bans on advertising, promotion and sponsorship

AFRO recommends that countries enact and enforce effective legislation that comprehensively bans any form of direct tobacco advertising, promotion and sponsorship; also, enact and enforce effective legislation to ban indirect tobacco advertising, promotion and sponsorship in line with WHO FCTC Article 13.

Zambia should become fully compliant with WHO FCTC Article 13 requirements and its guidelines by 28 August 2013.

Tobacco prices and taxes

AFRO recommends that countries increase tax rates for tobacco products to be at least 70% of retail prices and ensure that they are adjusted periodically to keep pace with inflation and rise faster than consumer purchasing power. It is also recommended that countries strengthen tax administration to reduce the illicit trade in tobacco products.

In addition, countries should protect public health policies from tobacco industry interference.

Zambia should raise tobacco taxes, ensure tax rates are adjusted periodically to keep pace with inflation, strengthen tax administration and protect public health policies from tobacco industry interference.
