South Sudan

Integrated Disease Surveillance and Response (IDSR)

Annexes W30 2018 (Jul 23 – Jul 29)
The total consultation in the country since week 1 of 2018 is 3,917,292 by hub, Kwajok registered the highest number of consultations as indicated in the table above. The total number of consultations by county is shown in the map above. See the key for more information.
Figure 1 shows the proportional mortality for 2018, with malaria being the main cause of mortality accounting for 32.9% of the deaths since week 1 of 2018, followed by bloody diarrhoea, and acute watery diarrhoea.

Figure 2 indicates the top causes of morbidity in the country, with malaria being the leading cause of morbidity 1,225,295 (55.8%) followed by ARI, AWD and ABD respectively since week 1 of 2018. Refer to the figure above for more information.
In the relatively stable states, malaria is the top cause of morbidity accounting for 46.1% of the consultations in week 30 (representing a decrease from 36% in week 29).
Among the IDPs, Malaria and ARI accounted for 35.4% and 20.4% of the consultations in week 30. The other significant causes of morbidity in the IDPs include AWD, Skin diseases, and Injuries.

The top causes of morbidity in the IDPs in 2018 include ARI, Malaria, AWD, Skin diseases, Injuries and ABD.
Malaria is the top cause of Morbidity in the country, a total of 1,225,295 cases with 158 deaths registered since week 1 of 2018. Malaria trend for week 30 of 2018 is above 2014, 2015 and 2016 as shown in the figure 4a, above.

Since the beginning of the year, a total of 95 malaria alerts have been triggered, 58 of those were verified. The Maps above indicate the location reporting malaria alerts from 2014, 2015, 2016, 2017, and 2018.
Acute Watery Diarrhoea | Trends over time

The number of AWD alerts triggered since week 1 of 2018 is 97, out of which 62 were verified. Maps above highlight the areas reporting AWD alerts from 2014 to 2018.

AWD is one of the top causes of morbidity in the country with 307,213 cases reported since week 1 of 2018 including 20 deaths. AWD trend for 2018 is above 2014, 2015 and 2016, as shown in figure 5a, above.
Since week 1 of 2018, a total of 42,522 cases of ABD have been reported country wide including 23 death. ABD trend for 2018 is below 2014, 2015, 2016, and 2017 respectively. Refer to figure 6a, above.

Total of 111 alerts were generated since week 1 of 2018, of which 72 were verified by the county surveillance team. Maps indicating areas triggering alerts since 2014 to 2018 are shown above.
Since the beginning of 2018, at least 367 suspect measles cases including 3 death (CFR 0.82%) have been reported. Of these, 268 suspect cases have undergone measles case-based laboratory-backed investigation with 164 samples collected out of which 26 measles IgM positive cases; 57 clinically confirmed cases; and 3 cases confirmed by epidemiological linkage.

Since week 1 of 2018, 84 alerts of measles were triggered and 64 of those have been verified at county level. Maps of areas raising alerts from 2014 to 2018 are shown above.
Among the IDPs, mortality data was received from Bentiu PoC & UN House PoC in week 30. (Table 6). **A total of 14 deaths** were reported during the week. Bentiu PoC report 11 deaths (78.5%) in the week. During the week, 3 (21.5%) deaths were recorded among children <5 years in (Table 6).

The causes of death during week 30 are shown in Table 6.
Mortality in the IDPs - Crude and Under five mortality rates

The U5MR in all the IDP sites that submitted mortality data in week 30 of 2018 is below the emergency threshold of 2 deaths per 10,000 per day (Fig. 20).

The Crude Mortality Rates [CMR] in all the IDP sites that submitted mortality data in week 30 of 2018 were below the emergency threshold of 1 death per 10,000 per day (Fig. 21).

Notes

WHO and the Ministry of Health gratefully acknowledge health cluster and health pooled fund (HPF) partners who have reported the data used in this bulletin. We would also like to thank ECHO and USAID for providing financial support.

The data has been collected with support from the EWARS project. This is an initiative to strengthen early warning, alert and response in emergencies. It includes an online, desktop and mobile application that can be rapidly configured and deployed in the field. It is designed with frontline users in mind, and built to work in difficult and remote operating environments. This bulletin has been automatically published from the EWARS application.
